

ISO advisory services

An internationally recognized approach to information security

OVERVIEW OF ISO

The International Organization for Standardization (ISO) was founded when delegates from 25 countries met at the Institute of Civil Engineers in London in 1947, and decided to create a new international organization “to facilitate the international coordination and unification of industrial standards.”

Since then, ISO has published more than 22,000 International Standards addressing almost all aspects of technology and manufacturing.

ISO International Standards ensure that products and services are safe, reliable, consistent, and comprise good quality materials and construction. For businesses, these frameworks are strategic tools that reduce costs by minimizing waste and errors while increasing productivity. They help companies access new markets, level the playing field for developing countries, and facilitate free and fair global trade via common practice benchmarks and expectations.

An ISO certification can help your organization secure financial information, intellectual property, employee information, and information entrusted to third parties. When appropriate, ISO certifications can reduce compliance costs by leveraging processes, procedures, and controls for other compliance efforts and can be a powerful competitive differentiator that demonstrates your ability to keep information assets secure.

ISO SERVICES

Coalfire’s specialists provide expert advice that allows your organization to better understand and prepare for the ISO certification process, while allowing you to stay focused on your business.

ISO advisory

Guidance or assistance with defining or developing the Information Security Management System (ISMS) including:

- Construction of the ISMS core documents responding to the required management system design components within Clauses 4 through 10 of the ISO/IEC 27001:2013 standard
- Remediation of control design gaps within the 114 Annex A controls
- Facilitation of the annual risk assessment and internal audit activities
- Development of corrective action plans, management reviews, and risk treatment plans, as necessary

External audit support

Preparation for formal assessments with accredited certification bodies via the facilitation of a managed request for proposal (RFP) among qualified vendors in addition to onsite support through the initial stage 1 certification audit and stage 2 certification audit cycles with appointed lead auditor resources.
