Driven by an increasing number of data breaches and theft, the Payment Card Industry Data Security Standard (PCI DSS) is designed to protect businesses and their customers from payment card data theft and misuse. Emerging technologies in the payments ecosystem are driving demand for a holistic approach to compliance, risk, and security.

EXPERT ASSESSMENT, ADVISORY, AND TESTING
Compliance requirements are increasingly complex with multiple paths to achieve compliance objectives. Coalfire works with organizations to scope compliance efforts to the appropriate level while helping them quickly identify and resolve threats that could impact business operations.

- Gain a better understanding of your organization’s compliance responsibility and how to effectively achieve it.
- Save time and resources by working with experienced assessors who understand your industry and technology and can help streamline PCI compliance processes.
- Solve new PCI challenges arising from the growth and evolution of your business and underlying technologies.
- Leverage our expertise cultivated from thousands of assessments, hundreds of application validations, and leadership in the acceptance of emerging technologies such as cloud services.

WHY COALFIRE
We help organizations meet PCI DSS compliance requirements – from scope definition and gap analysis to assessments, technology validation, and program strategy. As one of the original Qualified Security Assessor (QSA) firms, we have performed thousands of PCI engagements. We don’t just assess compliance, but rather we work with organizations to align compliance investments with broader business and security objectives.

“I’m impressed by the breadth of knowledge that Coalfire assessors have shown regarding PCI DSS requirements and how they apply to our environment. The assessors know the requirements in detail and can readily speak to how implementation of particular processes and methodologies in our cloud-based environment satisfy those requirements.”

- QUALPAY CIO
OUR SERVICES
To help businesses achieve and maintain compliance with PCI DSS and protect payment card data, we provide services to support PCI activities throughout all stages - from building a PCI program to performing ongoing assessments aimed at improving your security posture.

PCI gap assessment
To identify gaps and opportunities for improvement, we assess your current environment against the entire PCI DSS standard using a combination of network architecture and documentation review, policy and procedure review, and observation of system component configurations.

On-site PCI compliance assessment
This phase involves performing the required PCI compliance assessments with an annual on-site PCI assessment. As a QSA and Approved Scanning Vendor (ASV), we can assess the current state of compliance, assist in remediation efforts, and create formal reports or observations of compliance.

Controls and security management solutions
We offer solutions that help you meet specific DSS requirements. In some cases, this can be consulting services to develop specific policies or procedures. In others, it might involve helping you fulfill specific requirements such as penetration testing and web application assessments. Our services include:

- Facilitated self-assessment questionnaires (SAQs)
- Point-to-point encryption validation (P2PE)
- PCI PIN validation
- Secure Software Framework (SSF) validation
  - Secure Software Lifecycle (Secure SLC) validation
  - Secure software assessments
- Point-of-sale (POS) vulnerability scanning
- QSA remediation guidance
- PCI DSS scope definition and reduction strategies
- PCI cloud security advisory
- PCI penetration testing
- PCI employee education and training
- External vulnerability scanning (ASV)

In addition, our CoalfireOneSM platform provides testing, documentation, reporting tools, and QSA support needed to meet your PCI compliance needs. The easy-to-use and secure CoalfireOne platform contains advanced features that make managing your risk and compliance program much easier.
