As your organization’s digital footprint expands in size and complexity, so does your risk. Because external environments are dynamic and often difficult to manage, you should take a continuous, automated approach to securing and managing external attack surfaces.

Coalfire understands how difficult it is to scale your security program to match the threat landscape. Through our managed services for attack surface management (ASM), our experts act as an extension of your security team, helping you achieve your business goals and solve your cybersecurity challenges.

With managed services for ASM, you can make informed security decisions and prioritize vulnerability remediation based on actionable intelligence. We combine the industry’s largest, most experienced penetration testing team with the methodology and tooling required to provide ongoing discovery, assessment, and management of your external attack surface.

Developed from experience conducting hundreds of red team exercises that mimic the adversary, as well as analysis of thousands of cloud, application, and network penetration tests, ASM unites an adversarial mindset with ongoing monitoring insight to help you understand risk; improve decision-making; and gain continuous visibility into your assets, vulnerabilities, and remediation efforts.

Our approach

By combining experience, tools, and managed services for ASM, we can conduct engagements more quickly and efficiently than by using your internal staff. Our proven approach helps lighten the load for your IT and security teams by delivering deeper insights into your attack surface and enabling us to discover, identify, and prioritize vulnerabilities to mitigate risk. In turn, your team can manage and respond to exposures faster, protect your business and its assets, and reduce your attack surface.

Managed services for ASM provides:

- **Proven methodology**: Comprehensive, repeatable processes that leverage automation and people to drive positive business outcomes
- **Customer success team**: Proactive communication, reporting, and advocates for your desired outcome
- **Discovery and reconnaissance**: Initial discovery and reconnaissance that map your attack surface and determine the asset baseline
- **Actionable intelligence**: No “noise,” just data and results that your team can act upon
Managed services for ASM

Our approach includes automated tools, expert guidance, and actionable intelligence to help you scale your security program to match your threat landscape.

Benefits of managed services for ASM

• **Discovery and monitoring of your attack surface:** Because you can’t secure what you can’t see, we help you uncover the unknown by continuously scanning the internet to identify, map, and monitor your organization’s external attack surface. We enhance visibility of unknown assets before attackers can get to them.

• **Risk identification and target prioritization:** Understanding where the most significant gaps lie and closing them before an incident happens can enable better resource prioritization for the risks that matter most. We collaborate with you to determine risk exposure and prioritize targets for further activities.

• **Adversary tactics and techniques:** Because we know how attackers think and act, we can prepare you to close windows of opportunity before attackers get to them. Our penetration testing teams mimic real-world attack scenarios to validate vulnerabilities and determine exploitation capabilities.

• **Remediation support and reporting:** A mitigation strategy should be more than guidance. We provide actionable intelligence and collaborate with you to remediate risk and support the operational efforts of your security team.

Why choose Coalfire for ASM

• **Proven and comprehensive:** We’ve completed vulnerability assessments for the world’s largest cloud service providers and small, medium, and enterprise Software-as-a-Service (SaaS) providers.

• **Deep technical expertise:** We are the largest provider of engineering, advisory, and assessment services to the largest cloud service providers and have capabilities in AWS, Microsoft Azure, and Google Cloud Platform.

• **Industry thought leadership:** For the past 10 years, we have trained and educated security professionals at Black Hat in the advanced tradecraft we developed.

Get actionable intelligence that matters.
